AHAVA HOME LEARNING ACADEMY

Kindergarten Science | Unit 1 | Day 1

Living and Nonliving

READ, OBSERVE AND LEARN

Living things need resources and grow through life stages. Nonliving things such as stones do not eat, grow biologically, or make offspring. A seed can look still but can grow under suitable conditions. Do not assume something is alive just because it moves.

DAILY INDEPENDENT PRACTICE

1. Name one living and one nonliving thing.

2. Is a dry seed part of a living organism or a rock? Explain.

3. Which is better evidence of life: a toy moving or a plant sprouting?

4. Draw a plant and label a visible part.
